Amendments to the Specification

Please replace paragraph [0025] with the following amended paragraph:

[0025] FIG 2 is a partial essential light paths view of the liquid crystal display in FIG 1. After passing through the light guide plate 362, Light beams emitted from the light source 361 are converted into planar light beams T which is composed decomposed of an s-polarization component and a p-polarization component (denoted by arrows s and p). The s-polarization component is orthogonal to the p-polarization component. The reflective polarizing element 342 of the liquid crystal panel has a polarization axis parallel to the s-polarization component, so that the s-polarization component can pass. The reflective polarizing element 342 also has a reflection axis parallel to the p-polarization component, so that the p-polarization component is reflected to the quarter-wave plate 366.
